DETAILED ACTION

Please note that there are two claims numbered 34. For purposes of this restriction, the second instance of claim 34 is now claim 35, and old claim 35 is now claim 36. A new claim listing is required with appropriate claim numbering (see 37 CFR 1.126).

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-8, with a technical feature of a method for identifying agents or compounds that modulate KSHV infection.

Group II, claims 9-13, with a technical feature of a diagnostic assay for KSHV infection.

Group III, claims 14-24, with a technical feature of a method of inhibiting KSHV-induced cellular gene expression or encoded biological activity, KSHV infection or KSHV-mediated effects on cellular proliferation and phenotype by administering antisense, siRNA or a ribozyme agent.

Art Unit: 1648

Group IV, claims 25-33, with a technical feature of an antisense oligonucleotide, siRNA or a ribozyme agent, an expression vector comprising the same, and a medicament comprising antisense, siRNA or a ribozyme agent.

Group V, claims 34-36, with a technical feature of an in vivo mouse model.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions listed as Groups II and V do not have a shared technical feature with each other or with the inventions of Groups I, III and IV. The technical feature shared among the inventions listed as Groups I, III and IV (a method for identifying agents or compounds that modulate KSHV infection) does not provide a contribution over the prior art, as evidenced by the teachings of Moses et al. (Ann. N.Y. Acad. Sci., 2002, 975:180-191). Moses et al. teaches the use of antisense to inhibit the KSHV-induced cellular gene c-Kit. As a result, inhibition of c-Kit activity reversed the KSHV-induced morphological transformation of dermal microvascular endothelial cells. Hence, in the absence of a contribution over the prior art, the technical feature is not a special technical feature. Accordingly, the inventions listed as Groups I-V lack unity with one another.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
